FF Meta: type for a purpose

In 1984, I persuaded the GERMAN POST OFFICE (Bundespost) to commission an exclusive typeface for all their printed materials. We had begun a comprehensive design programme for the state-owned agency, which had been using a plethora of typefaces including dozens of dissimilar fonts from the Helvetica family. An exclusive typeface could end this chaos and give a coherent look to thousands of forms, brochures, advertisements and phone books.

CONSTRUCTION PRINCIPLE OF FF META

In 1985, we started the project by defining targets. It was supposed to be:

- 1 legible in small sizes;
- 2 neutral, with a non-fashionable design;
- 3 available on all systems;
- 4 available from all suppliers;
- 5 economical (space-saving);
- 6 available in several, clearly distinguishable weights;
- 7 unmistakable and characteristic; and
- 8 technologically up to date.

FF META

Some of these parameters may sound strange today, but back in 1985, each typesetting system had its own, exclusive fonts which couldn't be used on other systems. After careful analysis, we looked at existing typefaces as possible candidates for redesign as well as sketching some alternatives.

We assessed what makes a typeface legible under certain conditions, and developed what still appears to be a coherent theory. Having presented this to the client, we drew two weights, regular and bold, which were then digitized at Linotype in Frankfurt on large mainframe computers.

By late summer we had set a few forms, pages from a telephone book and brochures. They were tested and approved. But before the new typefaces were officially accepted, the whole project was cancelled. It appeared to be a political decision. And despite my protests that Postscript and desktop computers were the future of typesetting, the people in Bonn never believed the work could be done using hundreds of typesetters and printers across Germany. They continued to use Helvetica in all its variations, until they finally switched over to Frutiger in 1999.

WE READ MAINLY ALONG THE TOP OF THE X-HEIGHT-CHARACTER DEFINITION, THEREFORE, CHARACTERS NEED TO BE STRONGEST IN THAT AREA

phonogram

AN

FF META CAPS

By 1988, desktop software had become available to digitize typefaces. We took the original drawings and developed the typeface for use by our own studio, *MetaDesign*, and named the font **Meta**.

It took ‘real’ type designers to finish it: Just van Rossum, our first resident type designer, and later Lucas de Groot, who added new weights to the family. When we set a catalogue for FontShop, they liked it and persuaded me to license it. They released it as FF Meta and it quickly became a bestseller. The FF Meta family now has 81 members, including the condensed version and Meta Serif Pro, Meta Correspondence, plus Turkish, Baltic and Central European versions. Every weight (except Meta Correspondence) has an expert set and a version with lining figures.

Designers around the world use it for all sorts of projects, none as prosaic as the job that first prompted it.

Most well-used typefaces today owe their existence not to designers’ whim, but to having been designed for a specific purpose. Times New Roman was Stanley Morison’s and Monotype’s solution to the problem of a daily paper being printed on a high-speed cylinder press in 1931 and to the challenge of fitting more words into a line than traditional newspaper faces had done previously. Bell Gothic was designed for telephone books, Frutiger for signage at Charles de Gaulle airport in 1976. Giambattista Bodoni designed and cut a new typeface for every printing commission he had, each size separately. DIN has been seen on every German road sign since the thirties and Letter Gothic was designed to withstand both the physical and aesthetic constraints of the golfball typewriter.

ffi **ffi** *ffl* **ffl** *ff* **ff** *fi* **fi**

FF Meta started its life intended to be set in small sizes and printed on bad paper – mostly on forms for the German Post Office, the *Bundespost*, and its design was based on well-known facts about legibility and recognition. We know that when we read, our eyes scan along the top of the x-height, so making the shapes along that line more explicit would help that process. The oblique pseudo-serifs lead the eye into the letter as well as from one to the other. They also help to open up close angles between vertical and horizontal strokes, avoiding dark spots. In larger sizes, these deliberate interventions might create too much noise, but at small sizes – those between 7 and 10 point – they actually add warmth.

We need to precisely distinguish one letter from another only when we are looking for detailed information, as in telephone books or instructional material. In books and even magazines, we tend to quickly glance over whole groups of letters, even words, as we read what we expect to read. To work for both tasks, FF Meta has very explicit lettershapes to facilitate recognition of individual characters in small sizes (like the curvy end on the bottom of the ‘l’), while the design makes long-distance reading just as comfortable as a ‘proper’ serif face. Its construction is based on contrast between outer and inner (counter)

shapes. These are rounded-off rectangles, while the outer shapes are ovals, creating not only contrast between horizontal and vertical strokes, but also one between outer and inner shapes. Contrast and rhythm (as provided by the oblique terminals and pseudo-serifs at the beginnings and endings of letters) are more important for continuous reading than explicit letterforms.

FF Meta Condensed

FF Meta also shows its origin as a well-researched rather than creatively ‘invented’ typeface by the fact that it runs about 12% narrower than, say, Helvetica. The condensed version manages to get even more characters into a line, increasing usefulness without sacrificing legibility.

As the stroke width on the condensed weights has to be a little lighter than on the regular ones, a gap opened up between the bold and black for an extrabold weight.

FF Meta Condensed therefore has six weights, while FF Meta only has five.

Figures

When FF Meta was first conceived in 1985, there were very few sans serif faces with old style figures. As, however, there are still plenty of applications which need mono-spaced, full size figures, all weights of FF Meta now have both lining figures for tables etc, as well as old style figures for text.

SMALL CAPS

FF Meta is not a geometric sans face, but rather a seriffless roman and thus perfectly suited for setting long copy in magazines and books. The normal weight is a little too light for classic text setting and therefore the book weight has been added. All weights – *EVEN THE ITALICS* – have **SMALL CAPS**, so one can set traditional styles for proper names, abbreviations or short headings.

Arrows

The arrow is one of the most useful non-alphabetic glyphs. I have been using an arrow on my personal stationery since letterpress days, and I designed the special dotted arrow for FF Meta. There are small and big arrows in eight directions:

On top of the subtle lettershapes and a good range of weights, it is these arrows that FF Meta make very suitable for signage and wayfinding systems.

FF Meta Correspondence

Office correspondence does not have to use a typewriter face anymore, nor do letters on a PC always have to be set in Times Roman. The Correspondence version of FF Meta is slightly more openly spaced than the typesetting version which makes the face more suitable for printing on low-resolution printers. Business applications like Microsoft Word do not offer the same subtle spacing that professional layout applications do, and more generous space between characters avoids clashes and dark spots on the page. Four weights are sufficient for business correspondence, and the figures are monospaced for tabular matter like invoices or spreadsheets.

FF Meta Headline

Under the direction of Spiekermann & Christian Schwartz, Joshua Darden created a Headline version with three widths (**normal, condensed, compressed**) and four weights each. There are several alternate characters for tight setting: an ‘a’ and ‘l’ without tails and a simple ‘g’. A few arrows and dingbats are also included.

Hxk p Hxk p Hxk p Hxk p **a a g g l l**

FF Meta Serif

It took three years and three designers to develop FF Meta Serif: Erik Spiekermann, Christian Schwartz and Kris Sowersby. All through the nineties, Erik Spiekermann had made several attempts at designing a companion for his original **Meta**. Colleagues had frequently been asking him which serif face would best fit to FF Meta. He recommended Swift, Concorde, Minion, FF Clifford and others until he realized that he should just make his own serif Meta.

At the beginning of 2005 Erik finally admitted to himself that he was stuck – all of his sketches looked like Meta with serifs added, not like a serif typeface that could survive on its own. He needed fresh eyes, so he got Christian involved who, in turn, asked Kris to take on some of the workload. After much trying, comparing, generating fonts and printing out samples, the final formula for a new Meta was found: two percent heavier and two percent more condensed than the sans.

Erik van Blokland's sophisticated technology *Superpolator* helped to extend the family, although manual corrections were always necessary: the spirit of a typeface can still not be delegated to software.

The OpenType version of FF Meta Serif offers Book, **Medium**, **Bold** and **Black**, each including *Italics* and of course SMALL CAPS, OSF, LF, TF and a range of arrows and other symbols. While it is a typeface that can stand up on its own in a wide range of applications, the extra benefit is its close relationship to the original **Meta**, its sans serif sister. The two families can be mixed in the same line and one can be used to accentuate the other. Using both on the same page adds variety and meaning to a text.

“It feels like Meta to me.”

„Fühlt sich wie Meta an.“

September, 2006

ERIK I noticed that all the l/c's looked pretty monoline. In the original Meta, they are much heavier in the center stroke, while the two end strokes are lighter. In the regular version the s now looks way too light, and it just occurred to me that this was why. Do check those characters against the original, even the condensed.

CHRISTIAN The original S and s always struck me as being much too heavy in the middle (and I corrected this in Unit), but the end strokes could stand to lose a bit of weight... See what you think of this clunkier, more interesting version of the Light weights and the resulting interpolations.

ERIK Yes, the Light is much better and especially the Light compressed. That should do it, with extra attention to the s. Yes, the middle may have been too heavy on some, but that was part of Meta's charme: those little idiosyncracies or inconsistencies. A bit of it needs to remain.

CHRISTIAN You're right. we threw too much bleach on it. take a look at these new S's and s's. Better? →→

January 24, 2007

CHRISTIAN I've just delivered a large (and nearly impossible) family of newspaper fonts and have turned my attention back to Meta Antiqua. Here is a font to play with, and a PDF. I've got all of the necessary characters in there for setting English and German, plus figures, although the punctuation is all still left over from the original. There are some minor weight problems (M and w, most glaringly), and the overall spacing may be a bit too tight, but I think the face is on the right track – it has the warmth and seriousness of the Economist text face, so it will work for magazines, and the sturdiness of a good news face. Most importantly, it feels like Meta to me and mixes well with the Bold. I'll be interested to see what you think. Kris has been working on first sketches for Unit Slab Italic. I like #3, which has slabs rather than tails on both incoming and outgoing strokes, but I also like the 'v' in #4 (which has soft tails incoming and outgoing – I like them but I feel like we should save the more cursive forms for Meta, to keep the two families differentiated).

January 25, 2007

CHRISTIAN It feels like Meta to me

ERIK It does, but still looks a little too big at the same size. The counters are bigger, so it appears that way. We need similar x-height in order to mix them.

CHRISTIAN I'll play with that tonight. The ascenders & descenders match Meta, so they can't really change – or should I try that too?

ERIK Perhaps we need to make it a little more condensed to get it a little darker?

CHRISTIAN I'm concerned that if we go much narrower, it isn't going to have a good proportion for text – Wired is using H&FJ's new Exchange (originally drawn for the WSJ), which is a bit narrower than this and doesn't end up looking very comfortable on a magazine page, at least for my taste.

ERIK Let's reduce x-height then.

January 27, 2007

CHRISTIAN Are we getting there?

ERIK We are. You're right – can't really condense it too much. In your sample settings, the plus 4 version does look good. The expanded track should be our zero, so it'll work between 8 and 10 pt.

CHRISTIAN That was my plan.

ERIK There may be a little too much noise in the some of the caps, but I'll go through them once I get to Berlin and print out the character set.

CHRISTIAN I've been having a hard time with striking the right balance between making the caps look like Meta and making them work together, particularly in all caps. I think we may have to abandon the diagonal cuts on E F T etc., or at least angle them out instead of in. There are a couple of alts at the end of the vfb, marked in blue.

ERIK Should we just release the regular and bold with italics + small caps, TF?

CHRISTIAN Yeah, I think so. Maybe with a medium or semibold for captions, sidebars, subheads – European newspapers always want this weight, and magazine designers can use it for text that reverses out of a picture. The Medium or Semibold will be really easy to make – I've just set Kris up with EvB's Superpolator, which even interpolates the kerning. How important do you think it will be to match the weights of Serif to the sans? I'm concerned that the Bold will look a little anemic if we match the main stroke weights to the sans, because of the additional contrast. I think I'll have Kris work out the Black in the testword only, so we'll have a little extra wiggle room to figure out the weight.

ERIK That'll make a workable family without having to go through all the weights. I can imagine then making a slightly heavier version for glossy paper and very small sizes or bad newsprint, but once we get to the black weight or lighter once, only making those for display, even a little narrower.

CHRISTIAN Yeah, that's a good idea. We can do a whole Headline family sometime in the future, with slightly narrower proportions and a little bit more contrast.

ERIK As a text face, it is supposed to go with Meta for captions and stuff, so together the family could provide everything needed for a magazine or even newspaper. Perhaps FontShop should make a combined package with Sans and Serif.

CHRISTIAN Or a couple of packages? One for newspapers, one for magazines. By the way, I just got a copy of a Swedish language paper from Turku, Finland called *Åbo Under-rättelser* that uses Meta Headline pretty nicely. It sets nice and tight.

February 9, 2007

CHRISTIAN I've finally gotten around to implementing your last round of requests. I'm skeptical of the serifless crossbars on E and F – it feels a little gimmicky to me, although it could work well in heavier weights. I prefer them with a little bit of taper – see what you think. The 2 and 3 are much better without serifs on top, and I've drawn two simplified B's. The more simplified one is probably best. Unit Slab is coming along really nicely, and we should have testwords for the whole family for you to look at next week.

Hangel Hangel

Hangel

Die größeren Innenräume lassen eine Antiqua leichter erscheinen als eine Sans mit gleichmäßigem Kontrast. Die Standstriche der **Meta Antiqua** als Werksatzschrift mussten stärker werden. Meine ersten Skizzen waren zu nahe an den Umrissen der originalen Meta mit veränderten Innenräumen und mehr Kontrast in den Strichstärken. Christian Schwartz hat die **Meta** digital nachgezeichnet und dabei leicht veränderte neue Formen gefunden, die in der Summe wirken wie das serifenlose Vorbild.

March 9, 2007

CHRISTIAN Kris and I have been plugging away at Meta Serif. We've passed the Italic back and forth a few times and we're both pretty happy with it now. Kris prefers the spurred bowls on a b and q, but I could go either way with them. I really prefer the 2-story g. I know it brings it away from the original, but I think it helps to make it look more like a real serif italic with a strong base in tradition. We tried not to get too clever with characters like k and z, but had a bit of fun with v and y, trying to get a hint of the original's angled terminals worked in. Please don't look too closely at the Italic caps – they're uncorrected obliques.

On the last two pages, you can see Kris's first sketches for the additional weights. I had him draw the Black, for interpolation and to see if it might work as a headline style, and I find it pretty convincing. It needs some work, but I think it's worth pursuing. The Bold and Medium may be a bit too light, especially the Medium, but Superpolator makes it incredibly easy to play around with the weights.

March 10, 2007

ERIK The Italic looks pretty good. There are a few letters that don't seem quite ready (t for example).

CHRISTIAN Yeah, it needs less angle on the top bit. It looks a little strange.

ERIK but I like the wild vwy. The ß in the Roman still has the spur on it that i thought we lost.

CHRISTIAN The inner serif, or at the x-height on the left side? What do you think of spurs vs. no spurs on abq? And 1-story vs 2-story g?

ERIK I am surprise at how good the weights look. I thought we might just publish a Bold, but this seems worth doing if we can get it done soon. The Medium is ok as an alternative for reversing-out or evry small sizes; it doesn't really have to be there for emphasis.

CHRISTIAN I'd like to make it just a tiny bit heavier, so it could work as a headline face, too.

ERIK Would you also do the Italics for all the weights?

CHRISTIAN Yes, of course. Kris is very fast, and *Superpolator* helps a lot. Now that I'm done with these two big magazine projects (I've delivered over 60 fonts to various clients since the beginning of the year), I'll be able to repond with comments for him a lot faster than I was.

ERIK Seems like a lot of work, but if we have to do a Bold Italic anyway, you might as well do the interpolation. MetaSerif is shouting to have a Condensed companion already!

CHRISTIAN Let's get the basic family out first! I have a method for getting a quick & rough Condensed by squeezing it and interpolating different x and y values. Maybe I'll play with this while Kris finishes the complete character sets of what we have so far.

ERIK So we'll have Book, Medium, Bold and Black, plus their Italics and Small Caps. O/S figures, LF and TF. A full OT family, except Greek and Cyrillic which would take it to OT PRO. But that's work for the winter.

May 14, 2007

CHRISTIAN Things are moving along nicely with Meta Antiqua. The Book is just about finished (all characters are drawn and accented chars are built, and I send comments on all of this stuff yesterday. The uncorrected proof is included.), and the other poles are in really good shape, missing only accented chars and needing a little more polishing. Kris sent his first attempt at interpolating the Medium and Bold last night, and I wanted to get your thoughts on the basic weights. The Bold is pretty heavy, but I think it works really well for emphasis and will even hold up on newsprint. Do you agree? It's a little hard to tell from unhinted outlines... I'll send a corrected font as soon as I get one back from Kris, so you can show the face off at Typo.

July 6, 2007

CHRISTIAN Here are all four of the romans, plus the Book Italic. Everything is drawn and corrected, most OT features are in place, and the only thing still missing is kerning. The features cover ligatures, s,c, lining and lc figures in proportional and tabular variants, and alternates (sso1 is the lc g in the italic; sso2 is the alternate E and F in all styles, including accented and sc versions). We're finishing the Black Italic over the weekend, and I should have the rest of the italics for you early next week. I'm really, really happy with how the family is coming along. I hope you agree.

July 11, 2007

CHRISTIAN Here's the full Meta Antiqua family. I made a few revisions in the romans, so please replace the set I sent last week with these new fonts.

In books and even magazines, we tend to quickly glance over **WHOLE GROUPS OF LETTERS** as we read what we expect to read. Las formas armonizadas, ein guter Kontrast, αντίθεση και ένας, важны для sono importanti per una leggibilità agradável. Yra daugiau paslapčių paslėptų; Sylt saulės šviesa šešėlyje. Biršekilde, 1984. To work for both tasks, **FF META** has very explicit lettershapes to facilitate recognition of individual characters in small sizes (like the curvy end on the bottom of the 'l'), while the design makes long-distance reading comfortable as a 'proper' serif face. Its construction is based on contrast between outer and inner (counter) shapes. These are rounded-off rectangles, while the outer shapes are ovals, creating not only contrast and rhythm (as provided by the oblique terminals and pseudo-serif beginnings and endings of letters) are more important for continuous reading.

Meer geld voor Am

Positieve adviezen Raad voor Cultuur voor Holland Festival, Toneelgro

Van onze verslaggevers

DEN HAAG – Grote Amsterdamse cultuurinstellingen moeten de komende jaren meer geld krijgen. Dat staat in het advies van de Raad voor Cultuur, dat vandaag is gepresenteerd.

De Raad voor Cultuur, het adviesorgaan van ministerie van OC&W, pleit voor meer geld voor de kunsten. De landelijke subsidie voor kunst moet van 244,5 miljoen euro worden verhoogd naar 271,1 miljoen. Dit bedrag is nodig om het

nieuwe subsidiesysteem, dat bij het kunstplan 2009-2012 in werking treedt, recht te doen.

“Een lager budget zou afbreuk doen aan de compleetheid, kwaliteit en kracht van de culturele infrastructuur in Nederland zoals die nu wordt ingericht.”

Het subsidiesysteem is drastisch gewijzigd. In het nieuwe systeem dat de bureaucratie tegenwoordig aan gaat, richt de Raad voor Cultuur zich op drie soorten instellingen die ontslagen zijn van de subsidie in de vier jaar subsidieaanpak (54 kunstinstellingen,

een aanvraag moeten indienen één van de acht specialistische fondsen, en instellingen die vier jaar subsidie krijgen en waarvan de Raad voor Cultuur elk jaar advies uitbrengt.

Toneelgroep Amsterdam komt van de Raad voor Cultuur in positieve zin met advies om de subsidie te verstellen.

Erik Spiekermann

Prof. Dr. h.c. Erik Spiekermann studied History of Art and English in Berlin. He is information architect, type designer (FF Meta, ITC Officina, FF Info, FF Unit, LoType, Berliner Grotesk et al) and author of books and articles on type and typography. He was founder (1979) of MetaDesign, Germany’s largest design firm with offices in Berlin, London and San Francisco. Projects included corporate design programmes for Audi, Skoda, Volkswagen, Lexus, Heidelberg Printing, Berlin Transit, Duesseldorf Airport and many others. In 1988 he started FontShop, a company for production and distribution of electronic fonts. He holds an honorary professorship at the Academy of Arts in Bremen, is board member of ATypI and the German Design Council and Past President of the ISTD International Society of Typographic Designers as well as the IIDD International Institute of Information Design. In 2003 he was awarded the Gerrit Noordzij Prize for Typography from the Royal Academy in The Hague, Netherlands. In 2006 he received an honorary doctorship from Pasadena Art Center. In 2001 he redesigned *The Economist* magazine in London. His book for Adobe Press, *Stop Stealing Sheep* has recently appeared in a second edition and both a German and a Russian version. His corporate font family for Nokia was released in 2002. The exclusive family of typefaces for Deutsche Bahn (the German railway system), designed with Christian Schwartz, was awarded the Federal German Design Prize 2007. He left MetaDesign in 2001 and now runs SpiekermannPartners with offices in Berlin, London and San Francisco. Clients include Bosch, Deutsche Bahn, Pioneer Investment, Messe Frankfurt, Nokia, Birkhäuser Verlag Basel and many others.
